VRS: The Power of Productivity

You have purchased a scanner because capturing the information from paper documents and forms is an important part of your overall information management strategy. Now how do maximize your scanning productivity?

VirtualReScan® is the answer. Patented VRS technology from Kofax® ensures that your scanning is as efficient and easy as possible, while also improving both the quality of the scanned images and the automated capture of information from your paper documents and forms. The result is lower scanning costs, lower data entry costs, and faster access to your information.

"VRS produces images that are better suited for automated recognition engines such as OCR and ICR software. Overall, VRS improved OCR character recognition accuracy by nearly 35%. The result is more accurate data capture and reduced re-keying or manual data entry." – Doculabs evaluation

Your organization handles an - Doculabs evalue incredible number of paper documents and forms every day. A fast scanner is important for keeping up with this deluge, but it is only part of the answer, because you also handle a wide variety of documents and forms. Some are on colored paper, some are unusual sizes, some are hard-to-read carbon copies, and some are photocopies of photocopies.

If you simply fed a stack of these mixed documents into a standard document scanner, some of the images would be too dark, too light, crooked, or otherwise illegible. These images are unacceptable for storage and produce poor results during OCR and other automatic processing, which means you need data entry operators to correct the bad results.

VRS produces high-quality images for even the toughest scanned documents.

You could sort your documents ahead of time by size, color, and so on. But even then, it is difficult to get a crisp image from a challenging document without scanning it over and over until you get it right. If you get it right.

That's where VirtualReScan comes in. VRS is the ultimate scanning productivity tool because it not only makes scanning easier but also reduces the cost of information capture.

VRS automatically examines and improves every image from your scanner. With VRS, you can scan that stack of mixed documents and be assured that each one will be automatically converted into the best quality image possible. No more difficult and costly rescanning, and no more time-consuming presorting. Scanning becomes as easy as pushing the Scan button.

And VRS makes every step of your information capture system work better and faster. In fact, a Doculabs study found that the high-quality images produced by VRS improve OCR accuracy by nearly 35% - which dramatically reduces the need for costly manual data entry and correction.

By making high-quality scanning so easy, VRS also helps you reduce costs even more by enabling distributed information capture without dedicated scanner operators. By capturing documents at the source, you save the costs and delays associated with shipping documents to a central scanning facility.

"With VRS you can just dump in a mixed batch of documents and it automatically straightens and crops everything. Before, we had to sort documents by type and set up the scanner for each type of document. VRS has eliminated that sorting. It saves us lots of time." – Shirley Schneider, file administrator, Amplicon

> Since our founding in 1985, Kofax has been the leading innovator in the conversion of unstructured documents and data into reusable electronic business information. Today, Kofax is the clear market leader and de facto standard in capture application software, device connectivity and image processing.
